

1.5 Between- and within-state alignment (higher = less traditional)

Between states — household: one point = one state  
 $r = 0.28$  ( $p = 0.045$ ),  $n = 51$

Within states — household: one point = one state-window  
 $r = -0.26$  ( $p = 0.000$ ),  $n = 228$
