

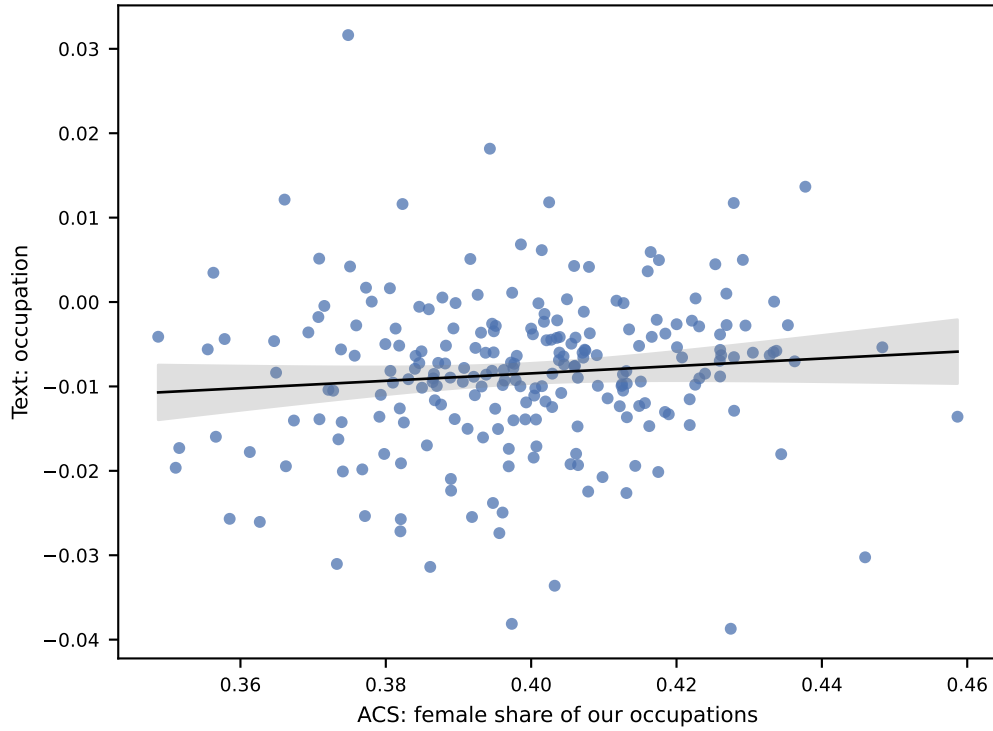

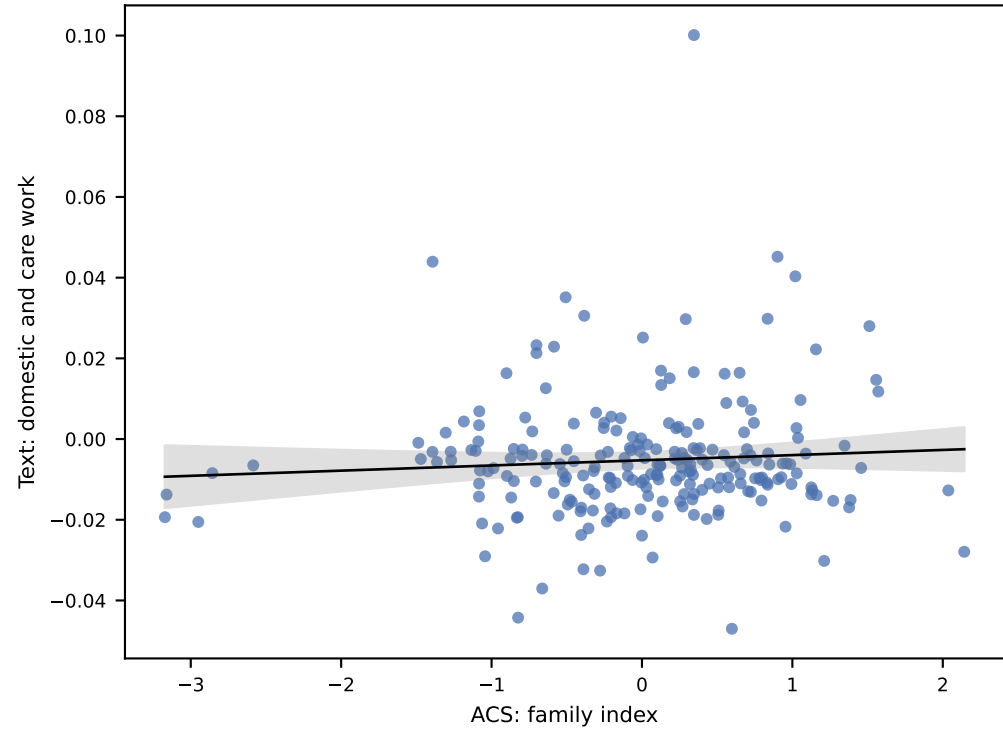

Figure 2. Does the text score agree with the survey? (higher = less traditional)

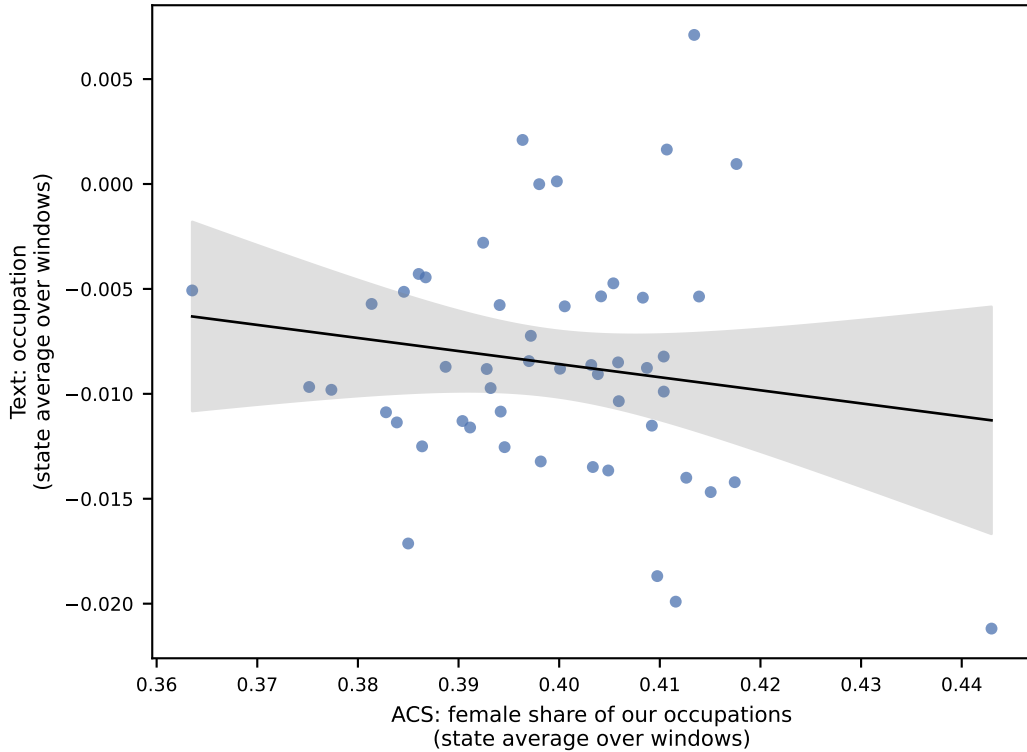

A. occupation: one point = one state in one window
 $r = 0.09$ ($p = 0.152$), Spearman $\rho = 0.13$ ($p = 0.044$), $n = 232$

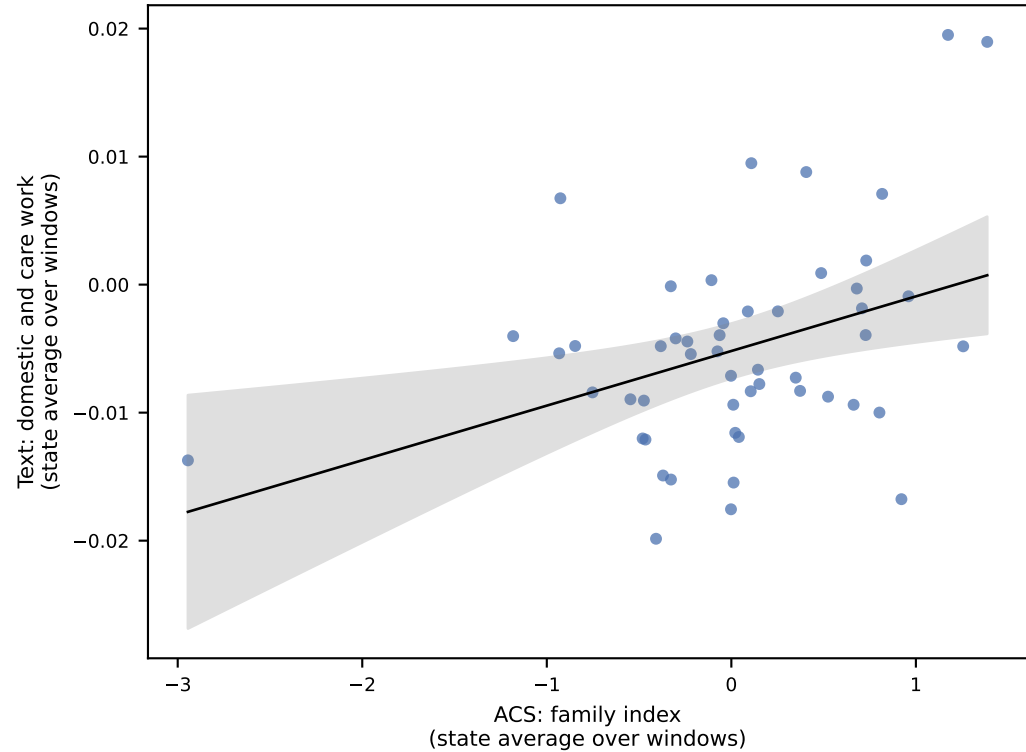

B. domestic and care work: one point = one state in one window
 $r = 0.07$ ($p = 0.284$), Spearman $\rho = 0.03$ ($p = 0.688$), $n = 228$

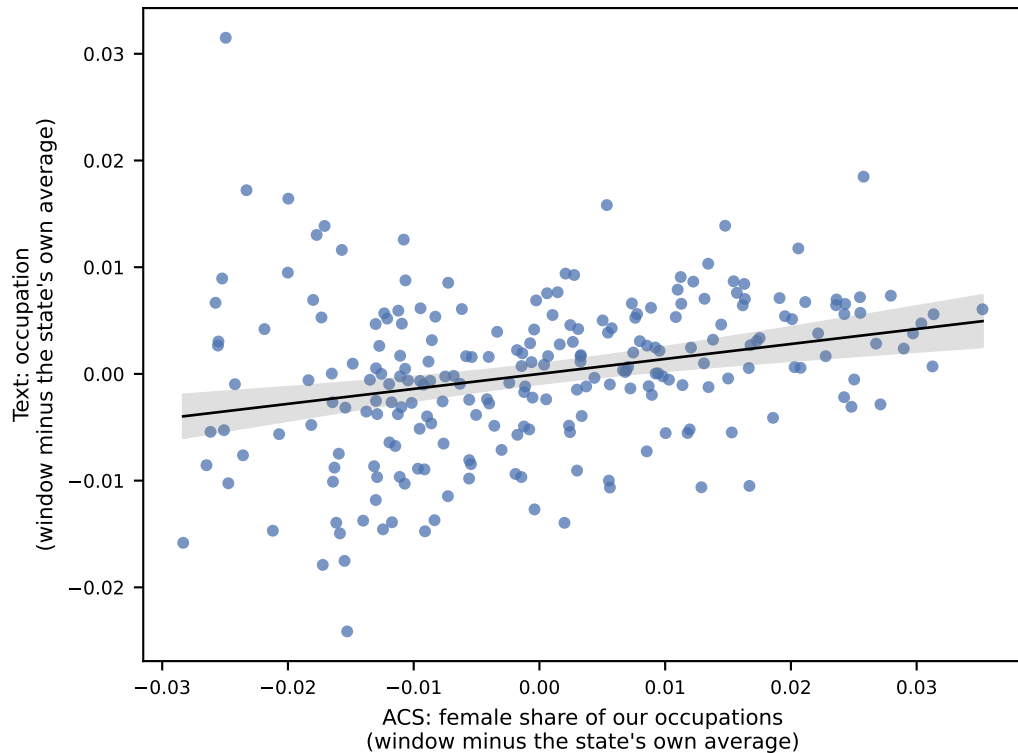

C. occupation, between states: one point = one state
 $r = -0.15$ ($p = 0.295$), Spearman $\rho = -0.11$ ($p = 0.430$), $n = 51$

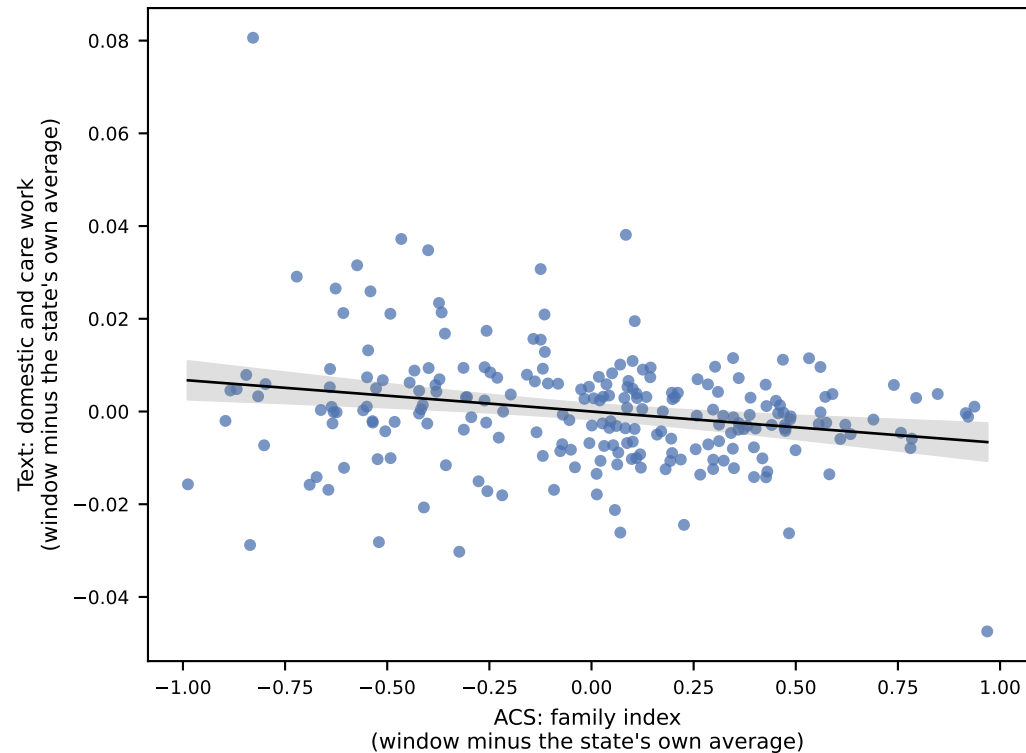

D. domestic and care work, between states: one point = one state
 $r = 0.38$ ($p = 0.006$), Spearman $\rho = 0.33$ ($p = 0.018$), $n = 51$

E. occupation, within states: one point = one state-window
 $r = 0.28$ ($p = 0.000$), Spearman $\rho = 0.32$ ($p = 0.000$), $n = 232$

F. domestic and care work, within states: one point = one state-window
 $r = -0.23$ ($p = 0.001$), Spearman $\rho = -0.21$ ($p = 0.002$), $n = 228$

C, D: are states that are less traditional in the survey also less traditional in text?
 E, F: when a state moves between windows in the survey, does its text move the same way? $r > 0$ = agreement.
